

Aslan 100 GFRP

NON FERROUS REINFORCEMENT

Reinforcement at Nakheel's Palm Cove Canal Mega project at the Dubai Waterfront.

The Cove canal project forms part of the onshore activities of the larger Dubai Waterfront project. The project was awarded to contractor Jan De Nul by the client Nakheel. The value of the contract is 70 million Euro.

The Works consist of 3 main parts: dry excavation, rock revetment and concrete retaining walls. The 9 km retaining walls are being lined with precast elements produced by ICON Precast LLC, Dubai.

The consultant, MouchelParkman specified the Aslan 100-10 mm as non ferrous reinforcement between the concrete retaining walls and the precast elements.

Cove Canal will be one of the main channels crossing the onshore part of Dubai Waterfront area which forms part of Nakheel's latest urban development.

Aslan rebars have been tested by the Dubai Municipality and are manufactured per ASTM D7205.
