

Aslan 100 GFRP

Reinforcement for MRT Softeyes in Taipei, Taiwan

Xin-Yi shopping area is located in the Xin-Yi District of Taipei. In days, it is a hustle and bustle business center; but at night, it becomes the largest and the fanciest shopping spot! Besides the most famous Taipei 101, there are some other fancy department stores such as Shin Kong Misukoshi Department Store, Vieshow Cinemas, New York- New York Department store, Neo19 department store, and the Eslite bookstore. Xin-Yi District is also known as "Taipei Manhattan"

The Xin-Yi MRT line, a 6.4 km extension of the Danshui line of the MRT initial network, is spanning the city from west to east. After its operation in 2012, it will facilitate the transfer services between downtown Taipei, Taipei 101 and the World Trade Center, serving as the most convenient access to the Xin-Yi Planned District.

Equipped with the Aslan GFRP Soft eye technique, the constructor, Obayashi – Fu Tsu JV, enjoyed a significant save at the construction period and the soil consolidation area, which leads to a great save at the cost eventually.

The soft eye is fabricated by Aslan 100 GFRP reinforcement, which comes in different diameters and can be supplied as stirrups.

Aslan can offer design assistance to the engineers.
