

# Aslan 100 GFRP rebars

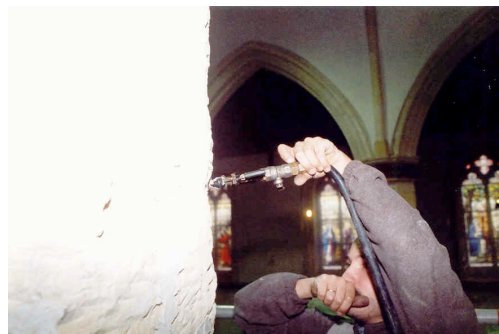

## NON FERROUS REINFORCEMENT

### GFRP anchors for ancient pillars in Church

The Saint Trudo church in Peer, Belgium is a historical monument of the 14th century. Building N.V. was doing renovation works and they noted cracks in the natural stone pillars of the church. Triconsult N.V., a specialised engineering consultant was called in and they specified the use of the Aslan, GFRP rebars installed in boreholes that were injected with a cementitious grout. So the sand stones of the pillars were anchored back together. And the stability was guaranteed.

Erik Batens bvba did the installation and grouting work.
