

# Aslan 100 GFRP rebars

**NON FERROUS REINFORCEMENT**

## GFRP anchors for masonry/blocks in Fortress

The fortress (military) of Saint Pietersheim in Lanaken, is a historical monument of the 12th century. It became a residential castle in the 15th century. This castle will be transformed into a cultural and touristic center. Triconsult, a specialised engineering consultant was called in to advise on the stability and restoration of the structures. Aslan 100 rebars were used to anchor the masonry blocks in the corners of the buildings (in 2 directions), to anchor the retaining walls and to anchor the balcony in the chapel of the castle.

T De Neef Engineering installed and grouted the Aslan 100, GFRP rebars, as subcontractor for Monument Group.
